PyData

Starting out with a PyData Workshop at the Googleplex in Mountain View, CA, in 2012 PyData has evolved into a successful conference series on using Python for the management, processing, analysis, and visualization of data. Alongside the popular conferences and the excellent PyData tools/packages a steadily growing PyData community has formed. Visit pydata.org or search for #pydata at Twitter to find out more.

NumFOCUS

The PyData conference series is organized by NumFOCUS, a non-profit organization which supports and promotes world-class, innovative, open source scientific software. NumFOCUS aims to ensure that money is available to keep projects in the scientific Python stack funded and available. So if you find value in these tools and have always wanted to give back, donating to NumFOCUS gives you a way of supporting either a specific project of your choice or all of these great codes at once.
